

Ucuuba

Virola surinamensis
Virola sebifera

Biome: Amazon

Ucuuba

Ucuuba tree has medium size but can reach 40m height. Fruit collection is realized from December to January. The seed can be pressed to extract butter. Seed dispersal can be realized by animals (in special by birds and monkeys) and water (once it remains preserved for until four months in flowing water).

Botanical family: Myristicaceae

Scientific name: *Virola surinamensis*

Biome: Amazon

Area: 0.25 hectares
